JourneyXTR

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment

JourneyXTR

RF Exposure Statement

To comply with FCC RF exposure compliance requirements, the antenna used for this transmitter must be installed to provide a separation distance of at least 20cm from all persons (indoor), and at least 48cm from all persons (outdoor). It must not be co-located or operating in conjunction with any other antenna or transmitter.

Safety Warnings

RF Exposure Statement

Do not use any other power adaptor except the one that accompanies this unit or a power adaptor identified in the list below.

The use of another adapter could result in damage to the unit.

The following power adaptor is qualified for use with this JourneyXTR.

The unit must be powered by a model DCT18W120150US-A0 AC/DC adaptor.

Caution

Connect the power cord of the power adapter to a socket outlet with a grounding connection.

JourneyXTR

Chapter 1

Introduction

JourneyXTR provides customers with the most capable 4G LTE product we've ever offered. With its 6 external antennas, the JourneyXTR allows customers to connect to the internet using 2.4GHz / 5GHz WiFi and Ethernet/LAN. Up to 32 devices may be connected at any time.

1.1. Unboxing Information

Inside the product package for the JourneyXTR, you should find the following items:

- JourneyXTR x 1
- Ethernet Cord x 1
- 2.4GHz WiFi antenna x 2
- 5.0GHz WiFi antenna x 2
- LTE Antenna x 2
- Power Adaptor x 1

JourneyXTR

1.2. Front and Rear Features

Front & Rear Panel

WIFI ANTENNAS

- 4 External Antennas
 - 2 x 2.4GHz
 - 2 x 5.8GHz

ETHERNET PORTS

- 5 Ethernet Ports
 - 4 x LAN
 - 1 x WAN

LTE ANTENNAS

- 2 External Antennas
 - 2 x LTE

INDICATOR LIGHTS

- Power
- VS (vSIM) Indicator
- LTE
- 2.4GHz Wi-Fi
- 5GHz Wi-Fi
- WPS
- LAN 1-4
- WAN
- LTE Signal Strength Levels 1-3

LED	STATE	FUNCTION
POWER	ON	Device power on.
	OFF	Device power off.
LTE	ON	LTE is connected.
	Flash	Device is transmitting data over LTE.
	OFF	LTE is not working.
2.4GHz/5GHz Wi-Fi	ON	The 2.4GHz/5GHz Wi-Fi is on.
	Flash	Device is transmitting data over 2.4GHz/5GHz Wi-Fi.
	OFF	The 2.4GHz/5GHz Wi-Fi is off.
WPS	Flash	WPS is activated and ready to connect.
	OFF	WPS is not activated.
LAN 1-4	ON	LAN port is connected.
	Flash	Device is transmitting data via the port.
	OFF	LAN port is not connected.
WAN	ON	WAN port is connected.
	Flash	Device is transmitting data via WAN port.
	OFF	WAN port is not connected.
LTE Signal Strength	All OFF	Device is not connecting over LTE.
	1 LED	LTE signal strength is low.
	2 LED	LTE signal strength is medium.
	3 LED	LTE signal strength is high.
VS Indicator	ON	Virtual SIM mode is on.
	OFF	Physical SIM mode is on.

INTERFACE	DESCRIPTION
WPS/Reset	Press and hold the button for about 1~5 seconds to activate WPS, and hold for more than 5 seconds to reset the device.
WAN	Connect to the Cable/xDSL Modem or the Ethernet.
LAN1-4	Connect to the user's PC or network devices.
Power	Connect to the power adapter provided in the package.

JourneyXTR

Chapter 2

Self-Setup and Activation

Ensure that the device is in a suitable location within the RV to receive cellular signal. Attach all supplied antennas to their respective ports on the JourneyXTR and connect the JourneyXTR to power.

- The JourneyXTR can be setup next to a window or windshield with adequate airflow. Cabinets may also be suitable, but can degrade cellular reception. Do not block side vents or set other devices on top of the JourneyXTR.
- If the JourneyXTR was pre-installed by your RV manufacturer, some configurations may be equipped with a rooftop mounted antenna.

Front Side

Cellular - LTE Antennas

Back Side

WiFi Antennas

2.1. Pre-Activation Checks

Before activating with TravlFi, please review these 3 steps. **If your RV came equipped** with the JourneyXTR from the factory, locate the device first and then proceed with steps 1-3.

- 1. Device Check:** Check that all antennas are secure and the JourneyXTR is powered on.
- 2. Status Check:** Power, vSIM and WiFi indicators should be illuminated. The LTE and signal strength indicators will turn on after activation of the JourneyXTR.
- 3. Review Chapter 3:** Continue to Chapter 3, connect your devices and call TravlFi.

JourneyXTR

Chapter 3

Accessing the Web User Interface: Log In and Set Up: Setup Wizard

3.1. Login

After turning on the JourneyXTR connect to it via Wi-Fi by following these steps:

1. Locate the default SSID (network name) and the default Wi-Fi key (password) on the sticker located on the bottom of the router.
2. On your mobile device, access the Wi-Fi settings menu. Select the SSID (network name) and enter the default Wi-Fi key (password) from Step 1.
 - a. Either 2.4G SSID or 5G SSID is fine to connect to.

Model: JourneyXTR	
Product: JourneyXTR	
Input: 12V = 1.5A	
Default Wi-Fi details	
2.4G SSID: CPE-0001 -2.4G-XXXX	Default router login details
5G SSID: CPE-0001 -5G-XXXX	IP address: http://192.168.0.1
Wi-Fi Key: xxxxxxxxxx	Username: admin
MAC: 00:e0:4c:81:96:c5	Password: admin
Device ID: BL25xxxxxx	SN: BL25xxxxxx
Made in China	FCC ID: GVQ-JourneyXTR
	Contains FCC ID: 2AJYU-8MH0011

After connecting to Wi-Fi, access the Web User Interface by following this step:

1. On your mobile device, navigate to an internet search browser, and input the IP address of **192.168.0.1**, then click enter.

JourneyXTR

After navigating to the Web User Interface, log in by following this step:

1. On your mobile device, login to the Web User Interface's **Home Page** using the default user name of **admin** and the default password which will be a series of letters and numbers. Both of these can be found on the sticker located on the bottom of the router.

Model: JourneyXTR

Product:
Input: 12V = 1.5A
Default Wi-Fi details
2.4G SSID: CPE-0001 -2.4G-XXXX
5G SSID: CPE-0001 -5G-XXXX
Wi-Fi Key: xxxxxxxxxxxx

3.2 Setup Wizard

After logging into the JourneyXTR, the **Setup Wizard** will appear. The **Setup Wizard** will guide users along the JourneyXTR configuration steps, it is imperative they follow the guide step by step.

FW:v1.1.4

Home Wizard Settings Features Management Logout

Setup Wizard

The setup wizard will guide you through how to configure this router for the first time. Please follow the setup wizard step by step.

Begin by clicking on Next.

Next>>

JourneyXTR

Step 1: Operation Mode

FW:v1.1.4

Home

Wizard

Settings

Features

Management

Logout

Step 1: Operation Mode

Gateway:

In this mode, the device is supposed to connect to Internet via ADSL/Cable Modem. The NAT is enabled and PCs in LAN ports share the same IP to ISP through WAN port. The connection type can be setup in WAN page by using PPPOE, DHCP client or static IP.

Bridge/AP:

In this mode, all Ethernet ports and wireless interface are bridged together and NAT function is disabled. All the WAN related function and firewall are not supported.

Wireless ISP:

In this mode, all Ethernet ports are bridged together and the wireless client will connect to ISP Router. The NAT is enabled and PCs in Ethernet ports share the same IP to ISP through wireless LAN. You can connect to the ISP AP in Site-Survey page. The connection type can be setup in WAN page by using PPPOE, DHCP client or static IP.

Cancel

<<Back

Next>>

The **Operation Mode** page is used to toggle the JourneyXTR between different operational modes; Gateway, Bridge/AP mode, and Wireless ISP.

To ensure your device works on your pre-selected data plan, you must start by selecting **Gateway**, you can always go back and change this selection at a later time if you wish.

Change setting successfully!

Do not turn off or reboot the Device during this time.

Please wait 0 seconds

The JourneyXTR will reboot once you have clicked the finished button on Step 6 to apply the changes you have made.

Remember to connect back to the router's broadcasted Wi-Fi network to connect to it again.

Remember, you may have changed what that looks like in the previous step.

JourneyXTR

Chapter 3

Accessing the Web User Interface: Understanding the Home Page

3.3. Home Page/Main Section

After completing the Setup Wizard, the **Home Page** of the JourneyXTR will appear.

FW:v1.1.4

[Home](#) [Wizard](#) [Settings](#) [Features](#) [Management](#) [Logout](#)

Internet

	IPv4	IPv6	Mobile Network	
Signal Intensity	Network Provider		Network Status	Connection Uptime
			Connected	0 Day 0:30:58
IP Address	Default Gateway		Primary DNS Server	Secondary DNS Server
192.168.42.158	192.168.42.129		192.168.42.129	
IMEI1	IMEI2	IMEI3	SIM Type	
8639660007152	8639060008655	3506960034483	Virtual SIM	
SN				
smc111240xgc7				

The **Home Page** is where users can check the connection status between the JourneyXTR and the Internet, and adjust settings such as Wi-Fi options, parental controls, and more.

JourneyXTR

3.3.1 Banner

At the top of the **Home Page**, a banner consisting of icons is presented. Each of these icons represents a sub-section, we will explore each sub section in this guide. We have already explored the Wizard sub-section earlier in this chapter. To the left of the icons, the current firmware version (FW) of the JourneyXTR is displayed.

3.3.2 Network Map

The **Network Map** is located in the middle of the **Home Page**. The line between the Internet Globe, the JourneyXTR, and the Internet devices on the map indicate the connection status between them.

A solid green line indicates a successful connection, whereas a red line with an x in the idle indicates that there is no connection.

If there is a red line with an x in the idle between the Internet Globe and the JourneyXTR there is no 4G LTE connection present. If there is a red line with an x in the idle between the Internet Globe and the JourneyXTR it is an indication that there is no Wi-Fi connection between the JourneyXTR and Internet devices either over Wi-Fi or via LAN.

JourneyXTR

The Internet Globe image, the JourneyXTR image, and the Desktop Image are all clickable and reveal menus.

JourneyXTR

Chapter 3

Accessing the Web User Interface: Settings

3.4. Settings

After selecting the wrench tool icon on the banner atop the GUI, the **Settings** of the JourneyXTR will appear.

The **Settings** is where users can toggle the JourneyXTR between Virtual and Physical Sim, rename the default SSID (network name), change the default Wi-Fi password, set the Wi-Fi security mode, scan for access points, enable or disable WPS functions, and set the Wi-Fi band as either 2.4GHz or 5.0GHz, amongst other features. It is divided into five distinct sections which all have their own subsections.

3.4.1 WAN

The **WAN** page is used to configure the parameters for the internet network that connects to the WAN port of the JourneyXTR. The page is divided into six distinct sections, those being Default Route, SIM Mode, IPv4, IPv6, Status, and VLAN.

JourneyXTR

3.4.1.1 Default Route

FW:v1.1.4

Home Wizard Settings Features Management Logout

WAN Operation Mode Wi-Fi LAN VPN

You can select which WAN connection as the default gateway route.

Default Route	SIM Mode	IPv4	IPv6	Status	VLAN
---------------	----------	------	------	--------	------

Default Mode: Cellular

Enable WAN failover to Cellular:

Save & Apply

The **Default Route** page enables the user to select which WAN connection (WAN1 or Cellular) provides the source of the internet to the JourneyXTR.

Selecting “enable WAN failover to Cellular”, allows the JourneyXTR to automatically continue providing internet through Virtual Sim, if the router that you connected to it via the WAN port has failed.

3.4.2.2 Operation Mode

The **Operation Mode** page is used to toggle the JourneyXTR between the different operational modes; Gateway, Bridge Mode, and Wireless ISP.

FW:v1.1.4

Home Wizard **Settings** Features Management Logout

WAN **Operation Mode** Wi-Fi LAN VPN

You can setup different modes to LAN and WLAN interface for NAT and bridging function.

Gateway: In this mode, the router is supposed to connect to the internet via an ADSL/Cable Modem. The NAT is enabled, and PCs in LAN ports share the same IP to ISP through the WAN port. The connection type can be set up on the WAN page by using PPPOE, DHCP client or static IP.

Bridge/AP: In this mode, all ethernet ports and wireless interfaces are bridged together. The NAT function is disabled. All the WAN related functions and firewalls are not supported.

Wireless ISP: In this mode, all ethernet ports are bridged together and the wireless client will connect to the ISP Router. The NAT is enabled and PCs in ethernet ports share the same IP to the ISP through wireless LAN. You can connect to the ISP AP via the Site-Survey page. The connection type can be set up on the WAN page by using PPPOE, DHCP client or static IP

Save & Apply Reset

The JourneyXTR must remain on Gateway mode to work with your data plan.

Associated Clients: Show Active Clients

Enable Universal Repeater Mode:

Save & Apply Reset

JourneyXTR

The **Basic** page is used to toggle between and set up both the 2.4GHz and 5.0GHz Wi-Fi interfaces (bands).

Wi-Fi as a feature can also be shut off on this page by selecting the 'Disable Wireless LAN Interface' box.

The JourneyXTR's SSID (network name) and guest SSID can both be edited on this page. Edits include the ability to rename the SSID and toggle its broadcasting status (whether or not it comes up as an option when users are viewing available Wi-Fi networks to connect to on their mobile devices). In addition, users can view Associated Clients which provides a list of all devices connected to the JourneyXTR's Wi-Fi network at that exact moment.

For more technically savvy users, the Wi-Fi channel width, sideband, and number can all be toggled from within the Wi-Fi page as well.

JourneyXTR

Item	Description
Disable Wireless LAN Interface	You may choose to enable or disable the wireless function.
Wireless Band	Default is “Mixed 802.11b/g/n”. It is strongly recommended that you set the Band to “802.11b/g/n”, that way all 802.11b, 802.11g, and 802.11n wireless stations can connect to the JourneyXTR.
Multiple AP	You can set the guest SSID from this button.
Network Type	You can configure the WLAN network type with this parameter.
SSID	Set a Wi-Fi name (SSID) for your wireless network. If you switch to Client Mode, this field becomes the SSID of the AP you want to connect with.
Channel Width	Select a proper channel bandwidth to enhance wireless performance. When there are 11b/g and 11n wireless clients, please select the 802.11n mode of 20/40MHz frequency band.
Control Sideband	Control channels are only applicable if your gateway is operating at 40 MHz bandwidth and the 802.11n mode is configured as Automatic.
Channel Number	For optimal wireless performance, you may select the least interferential channel. It is advisable that you select an unused channel or “Auto” to let the JourneyXTR detect and select the best possible channel for your wireless network to operate on from the drop-down list.
Broadcast SSID	You may choose a visible or invisible SSID broadcast. When it is enabled, the JourneyXTR’s SSID will be broadcast in the wireless network so that it can be scanned by wireless clients and they can join the wireless network with this SSID.

JourneyXTR

WMM	WMM provides basic Quality of service (QoS) features to IEEE 802.11 networks. WMM prioritizes traffic according to four Access Categories: voice, video, best effort, and background.
Associated Clients	This option shows you all the clients who are connected to a SSID.
Enable Universal Repeater Mode	Repeater mode.

Selecting **Show Active Clients** leads to the Active Wireless Client Table which displays a list of the current devices that are connected to the JourneyXTR at any given point in time.

Active Wireless Client Table-wlan1

This table shows each wireless client's network status.

JourneyXTR

The **Quality of Service (QoS)** page enables user's to limit the upload and download speeds that a specific mobile device is receiving.

Quality of Service is an excellent and underutilized tool that allows you to train your JourneyXTR to divide up your available bandwidth between applications. With good QoS rules, you can ensure that your streaming video doesn't stutter because a big file is downloading at the same time, or that your work laptop isn't sluggish when you're trying to meet that last-minute deadline while your kids are playing games online.

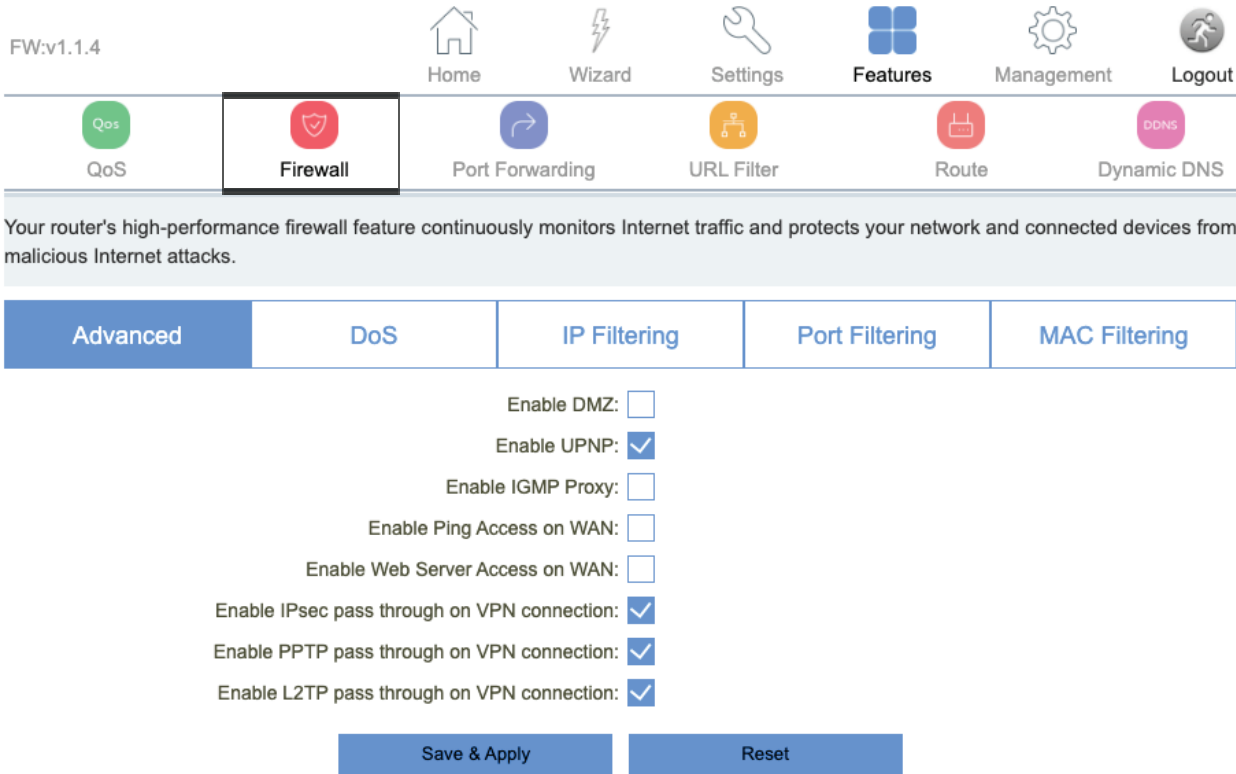

Item	Description
Automatic Uplink Speed	Automatic uplink speed.
Manual Uplink Speed (Kbps)	Set the download speed of your internet access.
Automatic Downlink Speed	Automatic downlink speed.
Manual Downlink Speed (Kbps)	Set the upload speed of your internet access.
Name	QoS rule name.

JourneyXTR

3.5.2 Firewall

The **Firewall** page enables user's to set up a plethora of firewall-related features and functions.

The screenshot shows the JourneyXTR web interface. At the top left, it displays 'FW:v1.1.4'. A navigation bar includes icons for Home, Wizard, Settings, Features (highlighted), Management, and Logout. Below this is a menu with icons for QoS, Firewall (highlighted), Port Forwarding, URL Filter, Route, and Dynamic DNS. A descriptive text block states: 'Your router's high-performance firewall feature continuously monitors Internet traffic and protects your network and connected devices from malicious Internet attacks.' Below this is a sub-menu with tabs for Advanced (selected), DoS, IP Filtering, Port Filtering, and MAC Filtering. The main content area lists several settings with checkboxes: 'Enable DMZ' (unchecked), 'Enable UPNP' (checked), 'Enable IGMP Proxy' (unchecked), 'Enable Ping Access on WAN' (unchecked), 'Enable Web Server Access on WAN' (unchecked), 'Enable IPsec pass through on VPN connection' (checked), 'Enable PPTP pass through on VPN connection' (checked), and 'Enable L2TP pass through on VPN connection' (checked). At the bottom are 'Save & Apply' and 'Reset' buttons.

3.5.2.1 Advanced

The **Advanced** page contains a series of checkboxes allowing user to toggle on or off specific fire-wall related functions, access, and VPN pass throughs.

3.5.4 URL Filter

FW:v1.1.4

Home Wizard Settings **Features** Management Logout

QoS Firewall Port Forwarding **URL Filter** Route Dynamic DNS

URL filtering is used to deny LAN user from accessing the Internet; block those URLs which contain keywords listed below. Please note: URL filtering cannot filter the HTTPS encrypted domain name.

Enable URL Filtering:

Deny URL address(black list):

Allow URL address(white list):

URL Address:

Save & Apply **Reset**

URL Filter Table

URL Address	Select
<p>Delete Selected Delete All Reset</p>	

The **URL Filter** page is used to deny LAN users from accessing the internet. Users can block certain URLs that contain specific keywords.

Item	Description
Enable URL Filtering	Enable or disable URL Filtering function.
Deny URL address (black list)	Blocking access to the URL list.
Allow URL address (white list)	Allowing access to the URL list.

JourneyXTR

URL Address	Block or allow access URL.
-------------	----------------------------

3.5.5 Route

The **Static Route** page enables user's to enable or disable the Static route and input the items around it.

FW:v1.1.4

Home Wizard Settings Features Management Logout

QoS Firewall Port Forwarding URL Filter **Route** Dynamic DNS

Once connected to the Internet, your LTE Router automatically builds routing tables that determine where traffic should be sent. Static routes can override this process, allowing traffic to be directed to a specific client or location.

Static Route

Enable Static Route:

IP Address:

Subnet Mask:

Gateway:

Metric:

Interface: LAN

Save & Apply Reset Show Route Table

Static Route Table

Destination IP Address	Netmask	Gateway	Metric	Interface	Status	Select
Delete Selected			Delete All		Reset	

JourneyXTR

Item	Description
Enable Static Route	Enable or disable Static route.
IP Address	An IP address, or Internet Protocol address, is a series of numbers that identifies any device on a network.
Subnet Mask	A number that resembles an IP address. It reveals how many bits in the IP address are used for the network by masking the network portion of the IP address
Gateway	The IP address of another router your JourneyXTR sends traffic too.
Metric	The routing metric.

3.5.6 Dynamic DNS

The **Dynamic Domain Name Services (Dynamic DNS)** page allows a dynamic public IP address to be associated with a static host name in any of the many domains and allows access to a specific host from various locations on the internet. DDNS requires that an account be set up with one of the supported DDNS service providers.

Dynamic DNS is a service that provides you with a valid, unchanging, Internet domain name (a URL) to go with your ever changing IP-address.

Enable DDNS:

Service Provider:

Domain Name:

User Name/Email:

Password/Key:

JourneyXTR

Item	Description
Server Provider	Select server from the drop-down list DynDNS TZO
Domain Name	The host name.
User Name/Email	The user name.
Password/Key	The password.

This page allows you to upgrade the Firmware to a new version. Please note, do not power off the device during the upload as it may crash the system.

Firmware Version: v1.1.4

Local Upgrade

Select File:

Online Upgrade

The current firmware version is the latest version

From time to time, new versions may be released of the JourneyXTR's Firmware. Firmware updates contain improvements and fix existing problems.

The **Local Upgrade** page enables users to upgrade the JourneyXTR's software.

The **Online Upgrade** section of the page enables users to upgrade the mobile module firmware to a new version.

Do not power off the device during the upload as it may crash the system.
